Novatex[®] TA

Protective Colloid

Complexes, chelates iron
effectively
Prevents catalytic damage
to cotton during oxidative
bleaching

Stabilizes peroxide bleach

// APPLICATION OVERLEAF

ADVANTAGES

Novatex TA is a demineralising agent it forms complexes with iron,calcium,magnesium and prevents catalytic damage to cotton during bleaching of cotton .It thus acts as a protective colloid.

Novatex TA stabilizes peroxide bleach bath.

Novatex TA has a buffer action in alkaline conditions.

TECHNICAL SPECIFICATIONS

Appearance	Clear brown liquid
pH	6.5 - 7
Solubility	Excellent

APPLICATION

Novatex TA for Bleaching :

Novatex TA : 0.5 – 1.5 % o.w.g
Alongwith other bleaching additives,

Novitrol 100*	: 0.5 – 1 % o.w.g
Spectralube Liq*	: 0.5 - 1 % o.w.g
NaOH	: 2 – 4 % o.w.g
Soda Ash	: 1 – 2 % o.w.g

Packing : 50 Kg & 100 Kg HDPE Carboys.

"The information offered in this leaflet is true and accurate to the best of our knowledge but WITHOUT GUARANTEE"

* Novitrol 100 – Wetting Agent , low foaming , APEO Free
Spectralube Liq – Anticrease , lubricant to prevent crease marks during bleaching,dyeing of fabric
