## FINISH CA LIQUID

Modified Cationic Super Softner

### Introduction:

Finish CA Liquid is a newly developed product, based on fatty acid amide derivative. It imparts excellent softness & bulky feel to cellulosic & synthetic fabrics.

### Technical Specifications:

Appearance	Free flowing creamish paste
Ionic Nature	Cationic
pH	6.5 to 7.0
Compatilbility	Compatible with all type of resins, softners and catalyst.
Shelf Life	Six months at room temperature. Prolonged storage may Increase the viscosity of the product but no change in active matter.

### Product Image:

Finish CA Liquid is equally effective on all types of natural & Synthetic fabrics.

### Advantages:

Superior softness with minimal effect on whiteness of treated goods.

Imparts excellent surface smoothness

Finish CA Liquid also improves physical properties such as tear strength, sewability of knitted goods, abrasion resistance resin finish fabrics.

.Minimal effect on colour fastness properties on cotton 1 viscose yarns, Improves the drawing and winding properties.

.Finish CA Liquid does not in any way impair the effect of optical whitening agents.

**Application:**

Amounts of application, on the padder

**Synthetic fibre**

10-50 g// FINISH CA LIQUID 05-30 g// FINISH CA LIQUID

**Cellulosic fibre**

The squeezing effect should be 60-80%

**Exhaust method:**

2 – 4 % o.w.o.g. FINISH CA LIQUID  
at pH 5.5 and a temperature of 40°C

**Packing :** 100 Kgs. HDPE Carboys
